INSTRUCTIONS

PHARMACY PLUS DEMONSTRATION COST DATA

The state will complete the **shaded** areas of these forms with the requested historical data and assumptions to assist in the development of the budget estimates for this waiver amendment. The sheets are designed to develop trend analyses and determine budget estimates for with and without waiver costs. The forms should be completed in the order presented in the instructions below. Included in several places are comments that pop up to ask the state to clarify data that is being inserted.

Historic (Current Law Populations)

Column A, Lines 8, 18, and 28 – Define the current population affected by the demonstration. An example would be defined as "*Medicare Aged*".

Column B-F, Lines 8, 18, and 28 – For each year enter the total expenditures for the population described above.

Column B-F, Lines 9, 19, and 29 – For each year enter the total number of member months for the population described above.

Without Waiver Projections

Column C, Lines 7, 12, and 18 – For each eligibility group enter the number of months that have expired from the end of the base year to the end of the first demonstration year. As an example, the base year begins January 1, 2000 and ends December 31, 2000 and the demonstration year begins July 1, 2001 and ends June 30, 2002. The months of aging would be 18 months. For the summary information at the bottom, adjust the formula to add up only those lines which have information listed in them.

With Waiver Projections

Columns D through H Lines 8, 13, and 18 – For each demonstration year enter the number of eligibles that will be diverted from full Medicaid coverage as a result of primary care coverage under the Pharmacy Plus Program.

Expansions

The state may use the same methodology for determining the expansion population that was used to determine with and without waiver projections (i.e., use of costs, trend rates, and aging to the end of the first demonstration year to determine the projected cost of the expansion population), or use its own methodology to determine the trend rate and projected cost for the expansion population for demonstration year (DY) 01. If the state uses its own methodology, Columns M and O need not be completed. But, trend rates must be provided in Column N.

Column L, Lines 7 and 12 - Define the expansion population that will be covered by the demonstration.

Column M – Enter the estimated eligible member months and per member per month costs of the expansion population based on historical data.

Column N – Enter the estimated trend rates for the member months and per member per month costs of the expansion population.

Column O - For each eligibility group enter the number of months that have expired from the end of the base year to the end of the first demonstration year. As an example, the base year begins January 1, 2000 and ends December 31, 2000 and the demonstration year begins July 1, 2001 and ends June 30, 2002. The months of aging would be 18 months.

Column P – This column allows the state two options. The first option is to utilize the formula generated demonstration years data that is calculated based on data entered by the state in Columns M, N, and O. The second option is to generate distinct demonstration year data for Column P (year -01) and enter it, overriding the formula in each entry. The remaining demonstration years will be calculated using the data supplied in Columns N and P.
